# RIDGE TILE FOR THE IZI® MODULAR ROOFING TILES

NEW PRODUCT

The IZI® ridge tile is the latest roofing accessory characterized by its impeccable modern design and dedicated to the perfectly flat IZI® modular metal roof tile. The element that crowns the roof covering at the ridge tile is intended to seal and, at the same time, aesthetically finish the roof ridge.

The ridge tile is available in a dedicated HC and UTK coatings with guaranteed repeatability of colour and structure which allows for the highest aesthetics of the roofing.

 Ridge tiles dedicated to other roof coverings from our offer is also available.

## Coating HERCULIT® [HC]

## Coating ULTIMAT® [UTK]

 Printing technology does not allow for faithful colour rendition, so the colours shown are approximate and may differ from actual colours.

# ROOF VENTS FOR THE IZI® MODULAR ROOFING TILES

The starting element of the ventilation system is the roof vents installed on the roof surface. However, in order to maximize the benefits of the roof vent, it is necessary to use a product that is specifically designed for this type of covering. This will ensure full functionality of the product. That is why we offer dedicated roof vents for roof covers made with IZI® modular metal roof tiles. They are made of plastic and do not corrode, and the set of accessories enables a tight and safe installation on the roof surface. The design of the roof vent ensures efficient draft. Accessories are also available, such as antenna penetrations and air outlets.

We also offer roof vents in a version with a specially shaped gutter that drains the condensate to the roof cover, thus protecting the building against possible damage resulting from excessive amounts of moisture in ventilation ducts.

 Moreover, roof vents intended for other roof covers from our offer are also available.

 Printing technology does not have the capability of reproducing coating colours precisely. The colours shown here are intended for the orientation purposes only and may vary from those of the coatings themselves.

We offer a variety of colors, so the customers can choose a color consistent with the color of the roofing.

# ROOF WALKWAY SYSTEM FOR IZI® MODULAR ROOFING TILES

A roof walkway system consists of roof equipment whose installation enables safe access to chimneys, air exhausts and antennas. Access is possible at any time of the year, even when the roof is covered with snow. After installation of the roof walkway system, there is also no risk of mechanical damage (indentation) of the roof cover, which is particularly important in the case of IZI® modular tiles.

For our IZI® modular tile systems, we offer a dedicated roof walkway system that includes benches, steps and snow barriers.

These system components have been specially optimized for use on roofs made with IZI® modular metal roofing tiles. They are made of high-quality, galvanized and powder-coated steel. They guarantee many years of use without the need to paint them or fix their defects caused by corrosion. Thanks to their design, they withstand very strong wind loads and the effects of snow and ice are counteracted by a specially designed anti-slip ribbed surface.

The color palette of our roof walkway system is consistent with the colors of the IZI® modular metal roof tiles, which allows us to maintain the highest aesthetic value of the roofing.
