

INSTALLATION MANUAL

VENTILATED AIR RIDGE TILE PANEL SERIES

THE POWER OF ROOFS

VENTILATED AIR RIDGE TILE

The AIR ventilated ridge tile, 1 m long, is a flashing finishing the roof covering in the ridge. It is dedicated to PANEL SERIES roof coverings. Its task is to seal as well as aesthetically finish the roof ridge. The biggest advantage of the ventilated ridge tile is the factory-made perforation on the front wall, which allows ventilation of both the roof and the attic without the need to install an additional ventilation strip in the ridge.

FIG.1

FIG.2

Before placing the ridge tile on the roofing, make cutouts appropriate for the seams of the roof panel used (**fig. 2**).

FIG.3

We use short 20 mm screws to fix the AIR ridge tile. It is recommended to use two screws on each surface between the seams of the roof panel (**fig. 3**).

THIS MANUAL IS ILLUSTRATIVE AND DOES NOT RELEASE CONTRACTORS FROM THE OBLIGATION TO FOLLOW THE RULES OF THE ROOFING PRACTICE.
